Cotton Varieties Planted, United States

1954-58

Estimates of the percentage of the various varieties of cotton planted in the United States in 1958, by counties, districts, and states, are presented in this report. Comparative data for the four years 1954-57 are shown by districts and states. A preliminary report containing percentage distributions of cotton varieties planted by counties and districts in the early harvesting area of south Texas was issued in mid-July.

The variety data presented herein are based principally on estimates furnished by cotton ginners for the territories served by their gins. Supplemental information is also obtained from others closely associated with cotton culture in their respective areas, such as seed breeders and dealers, and county agents.

These estimates indicate that on a belt-wide basis two general varieties, Acala and Deltapine, account for one-half of the cotton acreage in 1958. Acreage planted to each is equivalent to one-fourth of the total acreage. The next two leading varieties are Lankart and Coker. In the current season, Deltapine accounts for 25 percent of the United States acreage compared with 31 percent a year earlier and 34 percent two years ago. Acreage planted to Acala accounts for 25 percent of the 1958 total compared with 21 percent in the preceding season and 17 percent two years ago.

Lankart continues to increase in relative importance and this season displaces Coker as the third leading United States variety. Estimates indicate that Lankart accounts for 13 percent of the 1958 acreage. A year earlier, this variety accounted for 9 percent of the total. Coker decreased in relative importance for the second successive year accounting for 10 percent of the 1958 total against 12 and 13 percent, respectively, in the two preceding years. A percentage distribution of the ten leading varieties in 1958 with comparisons for four previous years is shown at the foot of this page.

In the southeastern area of the belt, Coker 100-W continues to be the principal variety of cotton planted. Estimates indicate that the proportions planted to this variety range from 97 percent in North Carolina to 32 percent in Alabama. For the area as a whole, Coker 100-W accounts for 63 percent of the total acreage compared with 65 percent a year earlier. Empire is the second most popular variety accounting for 17 percent of the 1958 total against 15 percent a year ago. Deltapine ranks third with 9 percent of the 1958 total acreage compared with 11 percent in 1957.

In the south central area of the belt, the leading variety continues to be Deltapine with 70 percent of the 1958 acreage against 69 percent last season. The proportions of the acreage planted to Deltapine range from 92 percent in Louisiana to 30 percent in Missouri. Delfos remains in second place among the leading varieties in this area followed by Empire, Fox and Stoneville. Delfos accounts for 9 percent of the 1958 acreage; Empire 5 percent; Fox 4 percent; and Stoneville 3 percent.

In the southwestern area of the belt, Lankart seems to be increasing its lead over other major varieties. Lankart accounts for 37 percent of the total acreage in this area against 32 percent last season. Deltapine ranks second with 12 percent of the 1958 acreage compared with 15 percent a year ago. Northern Star is the third most popular variety in 1958 with 9 percent of the total. Acala is fourth with 8 percent, and Western Stormproof is fifth with 6 percent of the Oklahoma-Texas acreage. A year earlier, Northern Star accounted for 7 percent of the total and Acala and Western Stormproof accounted for 9 and 3 percent, respectively.

In the far western area of the belt, Acala continues to be the predominating variety, accounting for 92 percent of the area total. This compares with 94 percent last season and 95 percent two years ago. There are some further increases this year in the proportions of Deltapine, particularly in Imperial and Riverside counties of California. Pima S-l is the leading American-Egyptian variety with practically the entire acreage of extra long staple cotton planted in this variety.

Estimated percentage of cotton acreage planted to specified varieties, United States, 1954-58
